Balancing the "Need To Share" &
the "Need To Protect"

HOW TO ENSURE SECURE COLLABORATION IN DYNAMIC ENVIRONMENTS

Secure collaboration begins with the right technology. In today's digital economy, organizations need to cooperate with cross border business units, suppliers, partners, and customers.

To exchange sensitive business assets without exposing them to undue risk, organizations must create a secure environment.

Data on the move or shared across today's extended enterprise can be protected with NextLabs' Secure Partner Collaboration solution. With NextLabs, any file type can be protected and accessed from any device to ensure secure collaboration. The solution can easily adapt to dynamic business situations and support ad hoc data sharing, while still allowing the organization to maintain centralized visibility and control of data-sharing policies.

WHITEPAPER

AUTOMATED INFORMATION HANDLING

In this white paper, we introduce the concept of automated information controls, the risks associated with manual policy approaches, typical automation scenarios, and the benefits associated with automating policies and procedures. This overview will assist business executives and policy planners in better understanding automated information handling across an extended enterprise to protect data and improve business efficiency.

FEATURED ARTICLE

DYNAMIC PROTECTION USING ATTRIBUTE-BASED ACCESS CONTROL

In this technical white paper, the importance of dynamic data protection in relation to Attribute-Based Access Control (ABAC) is discussed.

With ABAC, companies can enhance their existing roles using attributes and policies. This is a more scalable method, which can adapt to everchanging dynamic environments. As seen through multiple use cases, NextLabs Data Access Enforcer (DAE) can be used to dynamically protect data using ABAC to ensure data remains secure through data masking, filtering, and data manipulation controls.

ENTITLEMENT MANAGEMENT

NextLabs Entitlement Management suite helps safeguard data and prevent data breaches by enhancing access control and data protection mechanisms in critical business applications using dynamic authorization and policy-driven data-centric security controls.

Powered by the patented dynamic authorization and policy enforcement platform, NextLabs Entitlement Management suite provides organizations with a framework to automate data classification, attribute-based access control (ABAC), data protection, and audit and reporting of business-critical information activity – enabling organizations to accelerate time to market and to rapidly meet their security and compliance objectives.

WHY DYNAMIC AUTHORIZATION IS A BIG DEAL IN DATA SECURITY

Collaboration with colleagues, suppliers, and partners all across the world is becoming increasingly important in order to complete tasks.

Supply chains run the length and breadth of the globe, and sharing information is critical to project completion. However, you must be aware of the potential security dangers associated with exchanging confidential or sensitive data. This blog post discusses how dynamic authorization makes it easier to control access to sensitive data, especially given the distributed nature of modern businesses.

PRESS RELEASE

NEXTLABS ANNOUNCES THE RELEASE OF CONTROL CENTER AND CLOUDAZ

San Mateo, Calif. – May 24, 2022 – NextLabs released a new version of Control Center and CloudAz. Control Center is the central component of the NextLabs' Data Centric Security product suite, powered by patented dynamic authorization technology and industry leading attribute-based policy engine to help enterprises solve the most complex access and data protection challenges.

Enhanced cloud-native support for hybrid and multi-cloud deployment, allowing companies to extend zero trust, dynamic access control to apps and data in the cloud, is one of the significant improvements in this edition. New features and capabilities, such as control authorization in a microservice architecture using centrally managed policy, allowing companies to leverage cloud-native technologies at hyperscale and reap the advantages of containerization and virtualization.
